

RUSTBUSTER PHOS-KLEEN B

PRODUCT DESCRIPTION

Rustbuster Phos-Kleen B is a surface cleaner, degreaser, and phosphating solution for the treatment of steel surfaces prior to painting.

IMPORTANT: THIS IS AN INDUSTRIAL USE PRODUCT AND PERSONAL PROTECTIVE EQUIPMENT IS REQUIRED.

AREAS OF USE

Phos-Kleen B is designed for use on flat surfaces of horizontal or vertical steel panels.

APPLICATION INFORMATION

Apply Phos-Kleen B direct from the bottle using a Scotchbrite type of nylex abrasive pad. Work in a circular motion into the steel work. Do not allow Phos-Kleen B to pool on horizontal surfaces.

When dry Phos-Kleen B will have turned the steel a grey colour and the surface will be slightly rougher than before. Any rust within the pits will have produced a nib on the surface as the Phos-Kleen B has reacted with it, these will need treating as follows,

Wash the surface to remove any dried surface salts using again a Scotchbrite nylex abrasive and fresh clean di-ionised water or better still Rustbuster Chlor-X Salt Remover.

As soon as washed and the surface is dry it is ready to paint. It is always best and recommended to prime the same day as final cleaning treatment.

CLEANING

Brushes and equipment used can be washed clean in fresh water. However once used in Phos-Kleen B we would not recommend using these brushes with any other liquid/paint.

PPE REQUIRED

You will need rubber gauntlets, eye protection, protective apron, Scotchbrite nylex abrasives, Rustbuster Chlor-X salt remover
