

RUSTBUSTER PHOS-KLEEN A

PRODUCT DESCRIPTION

Rustbuster Phos-Kleen A is an industrial strength rust remover designed for commercial use only, containing a blend of hydrochloric and phosphoric acids. It is especially fast acting and will rapidly remove rust from steel, returning the steel to white metal.

Steel items should not be left unattended in Phos-Kleen A for long periods of time as the acid is strong enough to remove good metal once the rust is gone. We do not recommend Phos-Kleen A for cleaning out petrol or diesel tanks. Once dry neutralise Phos-Kleen A with Rustbuster Chlor-X solution or fresh water.

IMPORTANT: THIS IS AN INDUSTRIAL USE PRODUCT AND PERSONAL PROTECTIVE EQUIPMENT IS REQUIRED.

The gel can be applied by Spray, Brush, Roller or thinning with water to create a rust removing dipping solution.

AREAS OF USE

All corroded steel or stainless structures, coated surfaces with good adhering coatings but with corrosion spots, areas with algae or barnacles, limestone etc.

APPLICATION INFORMATION

Apply to surface rust by brush working into the surface.

Once applied, the Phos-Kleen A will react with the surface rust and fizz on the surface, if the surface being treated is heavily rusted further application maybe necessary.

Items left to soak in Phos-Kleen A should be watched at all times. Phos-Kleen A will eat rust AND clean metal.

Once items are cleaned to an acceptable level all items should be neutralised with Chlor-X Salt Remover (direct to surface formula) or fresh water.

Whilst Phos-Kleen A does leave a light phosphate to the surface of the metal it best to coat these asap to stop the items from flash rusting.

CLEANING

Brushes and equipment used can be washed clean in fresh water. However once used in Phos-Kleen A we would not recommend using these brushes with any other liquid/paint.
